JOEY'S PROJECT WORK TEMPLATE

1. PROBLEM:

[Write your problem here]

2. CONTEXT:

[Explain why this code exists and what part of the project it belongs to]

3. GOAL (What "done" looks like):

[Describe the final expected behavior]

4. ENVIRONMENT (important):

OS:

Framework:

Server:

Database:

Browser:

Editor:

5. RELEVANT CODE SNIPPET ONLY:

paste only the part that needs help

6. WHAT I WANT FROM YOU (choose as many as you need):

- Debug line by line and show failure points

- List top 3 likely causes

- Show how to verify each cause

- Generate logic only

- Create scaffold first

- Fix ONLY the error (don't rewrite everything)

- Add comments and explain flow

- Create test cases

- Walk me through terminal commands and verification

- Restate your understanding before writing code

- Audit your own code

7. OPTIONAL NOTES:

[Any extra notes or instructions]
